

# Pathology Data Mappings All Systems

Pathology Results must be received in atomised HL7 format in order for the results to be picked up by the CAT extractor. 'Atomised' format means that the HL7 results contain the data in predefined coded segments. The test name and LOINC (Logical Observation Identifiers Names & Codes) code are the important bits of data the extraction tool looks for. The same mappings apply to BestPractice, MD3 and Zedmed.

The table below lists all pathology results extracted by the latest version of CAT4 and is frequently updated - please make sure you are on the latest version to ensure your pathology data is recognised correctly.

CAT Pathology Result Collected	TEST NAME AND/OR LOINC CODE
ACR	Listed in the BP database as an ACR result (with the BP pathology code 17) 32294-1 30000-4 9318-7 14959-1 Alb/Cre Alb/Creat Albumin/Creatinine Albumin/Creatinine Ratio Urinary Albumin/Creatinine Ratio Urinary Albumin/Creat Ratio Microalbumin Ratio 30001-2 Albumin/Creat U Ab Creat Ratio MA Creat Ratio Malb/Crea Alb Creat Ratio  OR manually entered result
