

Conditions Data Category Mappings BP

The data collection process collects conditions that are found on the Best Practice 'Past History' screen in both the active and inactive parts of the screen.

The list below describes how CAT Plus treats each condition category. Some conditions are treated as being current whether they are recorded as active or inactive (i.e. they are not recoverable) and others only if they are recorded as active.

This list will be reviewed by our clinical advisors and occasionally can be changed to include new conditions and to revise the criteria.

Please also refer to [the mapping guides](#) for your clinical system on the details of what CAT4 maps to the conditions listed in this table.

Pregnancy

Pregnancy is true if a Pregnancy record has been created from an encounter. CAT4 will report a patient as being currently pregnant until an outcome of a pregnancy has been recorded.
