

PAT CAT Release Notes 3.4

3.4.39

Bug Fix

- Fixed FH and version checks in CV Event Risk report
- Fixed Baby Birth Weight Recorded issue in nKPI report

New Report and Updates

- New Report: Cervical Screening
- New "Screening" report tab structure
- Updated Report: LDL
 - Categories has changed to align with CAT
 - Report recalculate is required to update the data

3.4.37

Bug Fix

- Applied code changes to handle virtual patient's (adjusted column) "Active (RACGP)" and "Status" data.
 - Virtual patients will be marked as active when there is an active duplicate patient.
 - Virtual patients will have a status of "Deceased" when it finds a deceased duplicate patient.
 - If a virtual patient's status is "Archived", "Inactive" or "Past" but there are "Active", "Current", "Transient" or "Banned" duplicate patients, then the virtual patient will have an "Active" status

3.4.32
