Pap Smear Summary Report

This report card shows results for pap smears for the uploaded data. It automatically filters for female patients only and shows the data stratified by age group and visit frequency. There are four main built-in report headings:

- Total Female Population (Last Visit < 36 months)
- Not Pregnant - Active Female Population (3x visits in last 2 years)
- Pregnant - Active Female Population (3x visits in last 2 years)
- Total (Pregnant/Not Pregnant) - Active Female Population (3x visits in last 2 years)

Each of these show the age group of the patients, the time passed since the last recorded Pap smear and the number of patients without a recorded pap smear. This report can be further refined by using the PAT CAT filters.
