Standard Reports

This report shows a number of aggregated reports; the National Key Performance Indicator (NKPI) report, the QAIHC report and the Online Service Reporting (OSR) report. These are mainly used by community controlled health services for their reporting, but can be used by any PAT CAT user. Please refer to the QRGs for each report for full details – available at help.pencs.com.au/cat.htm

Standard reports in PAT CAT can be filtered. This is not always required but for the NKPI report archived patients should be included and deceased patients (as of 2018) should be excluded. Use the Patient status filter to only look at the patients of interest.
