CLEANSING PAT

Cleansing PAT provides reports based on the algorithms used in the Cleansing View in CAT4 and shows the information in an aggregated way to allow reporting on data completeness and coding for all clinics providing their de-identified data.
Similar to CAT4 the PAT CAT Reports and Cleansing PAT icons can be used to switch between the different views. The light blue colour indicates which view is currently active.

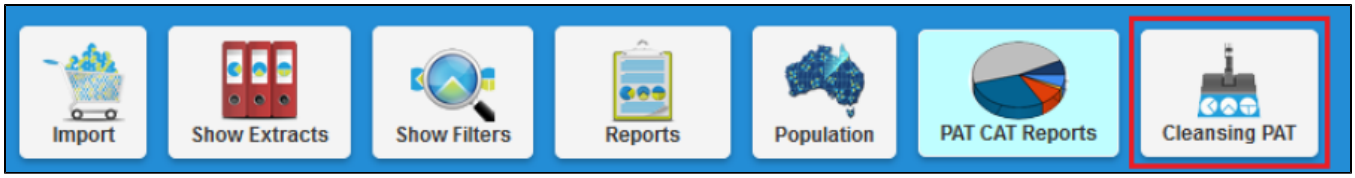

Figure 119: Cleansing CAT Icon

Currently there are two reports available in Cleansing PAT – Indicated Diagnoses and Missing Clinical/Accreditation Items.
