

# My Health Record Status

This graph will show patients that have an IHI recorded and, of that group, patients that the clinical system has detected have a My Health Record.

- IHI not recorded = no IHI has been recorded for this patient
- IHI recorded and My Health Record exists = Patient has an IHI and a My Health Record has been set up either by or for the patient
- IHI recorded and My Health Record does not exist = Patient has an IHI but no My Health Record has been setup
- IHI recorded and My Health Record unknown = Patient has an IHI but the clinical system has not been able to establish if the My Health Record exists.

 Best Practice Users please note that to update a patient's MHR status from unknown the 'My Health Record' menu needs to be accessed in BP. If no one has clicked on 'My Health Record' then CAT4 will list the status as 'unknown'.
