

# TIMELINE

The Timeline functionality allows you to view changes in your data extracts over time. Most graphs have a 'Timeline' button at the top right near the 'Export' and 'Print' buttons.

**Note that the timeline only shows data from the total patient population – it does not work with filters.**

- Click segments from any graph(s) you like
- The 'Timeline' button of a graph becomes active when a segment is selected on that graph
- Click any active 'Timeline' button
- The Timeline graph is loaded into the 'new Timeline' tab at the far right of the tabs
