Bi rt h W ei g ht	For the Maternal Health Care report, CAT can extract the birth weight of the child from two sources. One is the child's record, which needs the weight entered and the date backdated to the child's birthday - this will be picked up under the 'Patient Record' report. For the Mother's Antenatal report the birth weight of the child has to be recorded in the mother's record. On the pregnancy screen under 'Pregnancy Outcoume' is a field of the baby's name and birth weight.

The following test names are recognised: • Breast Mammogram Screening • Bilateral Mammography • Ultrasound Breast Bilateral • Wesley Breast Clinic Consultation Report • Mammogram • Mammogram-normal • Breast Mammography • Mammography - Bilateral • Mammogram Breastscreen NSW • Screening Mammogram - BreastScreen Queensland

Urinary creatinine	CAT4 will extract the Urinary Creatinine from HL7 results

* **NOTE:** Pathology results received in HL7 format will be viewable from the Summary Views panel Measurements tab and will be extracted for CAT4. To enable CAT4 to extract this data it needs to access the Blobs folder. This folder is used by Zedmed to store HL7 based data. The default location is c:\zedmeddata\blobs but this can vary depending on your installation – to verify the location you can check **CRS_App_Server.ini** (which may be in a folder called ZedmedServer) which should have an entry called *BLOBFilesPath=C:\ZedmedData\Blobs*

NOTE: Pap Smear Pathology results received in HL7 format are not automatically updated to the Measurements tab > Pap Smears list. To see the results in that tab the GP must right-click the Pap Smear result listing in the Results Inbox and choose 'Create Pap Smear'. This will create an entry in the Pap Smears list.
