

CAT4 Release notes V4.32 February 2021

This release brings the following changes and improvements:

- Added totals of patient count to bar charts for easier use
- Added new category 'Automatic High Risk' for CV Event Risk graph for patients who are at high risk due to existing conditions and other criteria
- Reviewed and updated Pneumococcal vaccination reports
- CAT4 now shows a new report called 'Pneumococcal At Risk' for all patients at risk by age and ethnicity
- The new report will also show the reason for being at risk as well as the date of the last immunisation
- The childhood immunisation report has been reviewed and now shows the 13vPCV vaccination status
- MBS items for the categories used in the MBS Attendance filter have been reviewed and updated including new RACF telehealth items
- New mappings added for screening mammograms
- New STI test names added
- Fixed issue with patient visit count in Registrar CAT
- Fixed issue with CV event Risk graph when using age in month
