

CAT4 Release notes V4.33 April 2021

This update to version 4.33 brings an update to the REFRAME Osteoporosis module

- Reviewed categories in the report table showing more relevant information and other minor changes
- New risk factor filter allowing our users to find all patients with a history of 'fracture' – this can be used for other CAT4 searches as it is not limited to REFRAME reporting
- New Bone Density Scan (DEXA) report available under the 'Screening' tab.
- Exclude 'third party' visits from visit count for all CIS
