

CAT4 Release Notes V4.10.1 May 2018

We have added new reports to the Daily CAT view which will enable many additional prompts to be created for display in Topbar:

- STI Screening
- Co-morbidities
- My Health Record Status
- Immunisations
 - Fluvax
 - Pneumococcal
 - Shingles

If you are not familiar with CAT Plus prompts and how to create them please check the user guide here: [CAT PLUS PROMPTS](#)

New filters have been added:

On the Conditions/Chronic filter to enable further filtering for patients with renal impairment:

- Kidney Transplant
- Dialysis

On the Medications/Antidiabetics filter there is now an option to filter for patients taking any oral OR injectables. Previously you could only filter for patients taking both.

Other changes:

- All Re-identify Reports now include the age of the patient in the DOB column in brackets after the date of birth. The format is DD/MM/YYYY (99)
- You can now filter the Smoking status report for the date of the last smoking assessment by using the Date Range Result filter.
- A new report has been added under the Digital Health tab to show the SWPE Graph for SHS Uploads. For more details see here: [SHS Uploads by PIP Quarterly Period](#)
- The Indicated Mental Health Report in Cleansing CAT won't show patients who were billed with the item 2713. This report will now exclude patients with any MH diagnosis recorded regardless if active or inactive
