

CAT4 Release Notes V4.10 March 2018

This upgrade contains:

- The Patient Reidentification Report selections at the bottom of the report have been replaced with icons.
- RecallCAT - CAT4 now provides a patient recall solution that offers both Voice and Text messaging services to targeted patient lists. This is available from the Patient Reidentification Report.
Refer <http://help.pencs.com.au/display/CG/Recall+CAT++SMS+and+Voice+Messaging+for+CAT4> for more information.
- BP Locations functionality has been added allowing practices to extract data by location.
Refer <http://help.pencs.com.au/display/CG/Best+Practice+Data+Collection+by+Location> for more information.
- Sexual Health - a report has been added for All Patients (vs the existing report for 16-34 range)
- Projects that receive CSV files - a fix has been added to prevent the CSV file being created and sent from the de-identified data file
