

# CAT4 Release Notes V4.22 January 2020

This release contains:

- New report on CV Event risk assessment performed and recorded in the clinical system, for full details see: <https://help.pencs.com.au/display/CG/CG+CV+Event+Risk+CIS>, currently available for MD and BP users
- Smoking cessation added for Best Practice users. Best Practice users can now see reports on their patient's stage of change in regards to smoking cessation. Due to the limited options in BP we have mapped the answer to "Patient would like cessation advice" as Yes = Ready to Quit and No = Not Ready to quit
- Heart Health Check MBS item - new MBS item (699/177) added to MBS Item report
- Patients who have opted out of their de-identified data being shared are removed from the CAT4 de-identified extract – BP users only
- Added pathology test names to the mapping
- Minor bug fixes and performance improvements
- Several minor UI and report details improvements
