

Shingles Vaccine Eligibility 3: immunocompromised people aged 18 years and over

Recipe Name:	Identify immunocompromised people aged 18 years and over
Rationale:	About 1 in 3 people will get shingles in their lifetime. Shingles usually affects older people, and the risk of complications increases with age, particularly for: • those over the age of 65 • First Nations people aged 50 and over • immunocompromised people aged 18 years and over with the following medical conditions: • haemopoietic stem cell transplant • solid organ transplant • haematological malignancy (blood cancer) • advanced or untreated HIV
Target:	Immunocompromised people over 18 years of age
CAT Starting Point:	 CAT Open Population Extract Loaded and Extract Pane "Hidden"

In the Filters Pane:

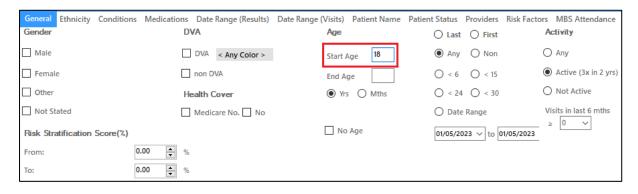

Step 1 (optional): In the "General" tab, select "Active (3x in 2 yrs)"

Step 2: In the "General" tab add Start Age "18"

Step 3: Following filters can be used to identify immunocompromised patients: Kidney Transplant
Blood and Immune System Cancer
HIV

To select, in the "Conditions" tab, select "Kidney Transplant" under Chronic - Kidney Disease

And/Or "Blood and Immune System" - Yes under Cancer

And/OR "HIV" under Other - STI

Step 4: Click "Recalculate"

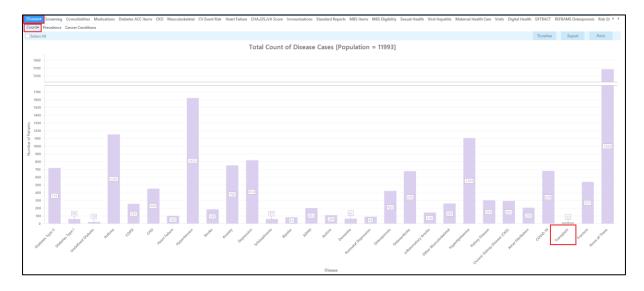

In the Reports Pane:

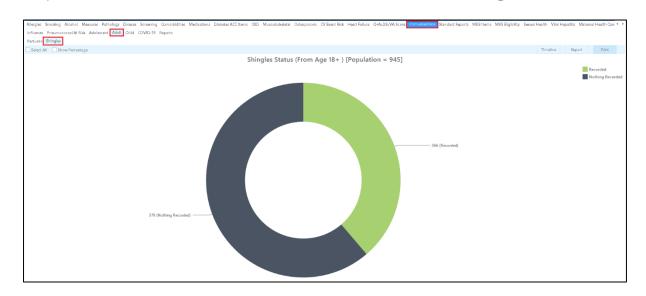

Step 5: In addition to the above filters, Transplant report tab can be used to identify patients who had:

- haemopoietic stem cell transplant
- solid organ transplant

To select, in the "Disease" tab, select "Transplant" under Count

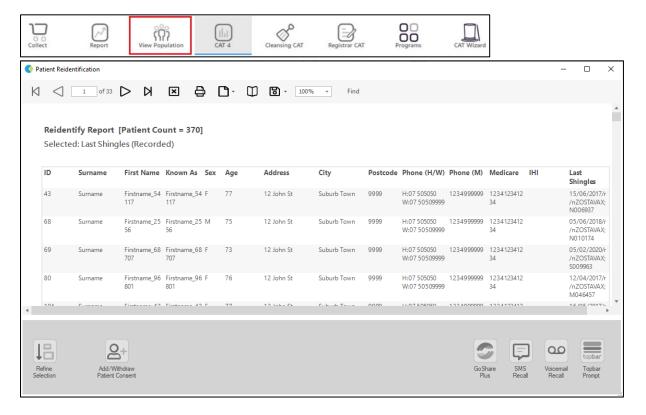

Step 6: Under the "Immunisations" tab, select "Adult" & select "Shingles"

Step 7a: Select "Recorded", then select "View Population" to see people aged 18 and over with one or all immunocompromising conditions and already have received Shingles vaccine (Shingrix or Zostavax) regardless of dose number.

OR

Step 7b: Select "Nothing Recorded", then select "View Population" to see people aged 18 and over with one or all immunocompromising conditions who have not received Shingles vaccine (Shingrix or Zostavax)

To Export Patient List on Microsoft Excel:

- 1. Click on the "Export Icon" at the top of the Patient Reidentification window.
- 2. Click on XLS File
- 3. Choose a file name and a location to save to (eg. Create a folder C:/ClinicalAudit/CAT Patient FollowUp)
- 4. Click "Save"

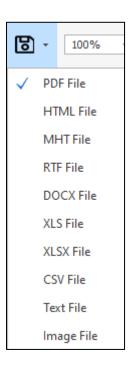

The steps above will produce a list of patients with contact details which can then be used to:

- 1. Go back through the individual patient records in the GP Clinical Desktop System (CDS) and update known records
- 2. Phone patients to update their record
- 3. Produce a mail merge to recall patients for follow-up

Similar steps can be taken to export the list in the following formats;

In these scenarios, the spreadsheets would then be sent to the Practice Nurse, asking for the patients on these lists to be recalled to administer the vaccine.

Optional:

Create a prompt to display in Topbar

Remember you need to be in the CAT4 Daily View to be able to create prompts. Other pre-requisites are:

- Topbar is installed
- CAT4 is linked to Topbar via Edit/Preferences/Topbar

To start click on the 'Daily View' icon on the top of your CAT4 screen:

Once you have applied the filter(s) and displayed the patients of interest as described above, you can create a prompt that will be shown to all clinicians using Topbar if a patient meeting the prompt criteria is opened in their clinical system. The full guide is available at CAT PLUS PROMPTS and a short guide on how to create prompts in CAT4 can be found at Creating a Prompt in CAT4

To start you have to use the drop-down menu at the bottom of the patient details report and select "Prompt at Consult - Topbar" then click on "Go" to give the new prompt a name.

The name you enter is the prompt text displayed in Topbar, so choose a simple but clear name that tells the clinician seeing the prompt what should be done.
