Legend:
- ■ IHI recorded and My Health Record exists
- ■ IHI recorded and My Health Record does not exist
- ■ IHI recorded and My Health Record unknown
- ■ IHI not recorded

73.02 % (IHI not recorded)

1.59 % (IHI recorded and My Health Record...

0 % (IHI recorded and My Health Record does...

25.4 % (IHI recorded and My Health Record...

IHI not recorded = no IHI has been recorded for this patient

IHI recorded and My Health Record exists = Patient has an IHI and a My Health Record has been set up either by or for the patient

IHI recorded and My Health Record does not exist = Patient has an IHI but no My Health Record has been setup

IHI recorded and My Health Record unknown = Patient has an IHI but the clinical system has not been able to establish if the My Health Record exists. This applies in particular to BP, as BP does NOT update the status automatically when the record is opened, instead it requires the user to manually check for the MHR status. This explains the high number of patients with IHS but unknown MHR status for BP users.
