CAT4 Release Notes V4.8.1.2 November 2017

4.8.1.1

This upgrade contains:

- Health Care Home licence coded functionality for pilot sites - supporting graphs and filters

4.8.1.2

This upgrade contains:

- Shared Health Summary uploads graph now provides a count of the number of uploads
- CV Event Risk Calculation error in extracts from CAT 4.5.2 has been corrected. The CAT 4.5.2 release included an incorrect update to the Familial Hypercholesterolemia (FH) diagnosis mapping which had the effect of shifting some patients into the increased risk category (16-19% risk marked in yellow). The total number of patients in the graph was not affected. FH patients in any CAT data received from CAT 4.5.2 (data version 1_20) are now ignored.
- CDM Impact project 'at risk' of Diabetes Type 2 category has been corrected to ignore patients with Diabetes Type 1.
