

# Hep B Screening and Management Guide

Unknown macro: 'scroll-exportbutton'

Hepatitis B (Hep B) is a blood borne virus infection which is increasing in prevalence in Australia. Hep B screening and management was identified by the Central and Eastern Sydney Primary Health Network (CES PHN) as a key area for improving health outcomes in their PHN catchment. CAT4's Hep B Screening and Management module was developed to allow clinicians to easily identify patients with risk factors for screening and follow-up patients with Hep B diagnosis for management and review. This guide serves as a quick reference for the Hep B Screening and Management module.

## Accessing the module

1. From the CAT Icons click the **Programs** icon

Then click on the Clinical Audit for Viral Hepatitis B program

The 'Viral Hepatitis/Hep B Screening and Management' report will be displayed:

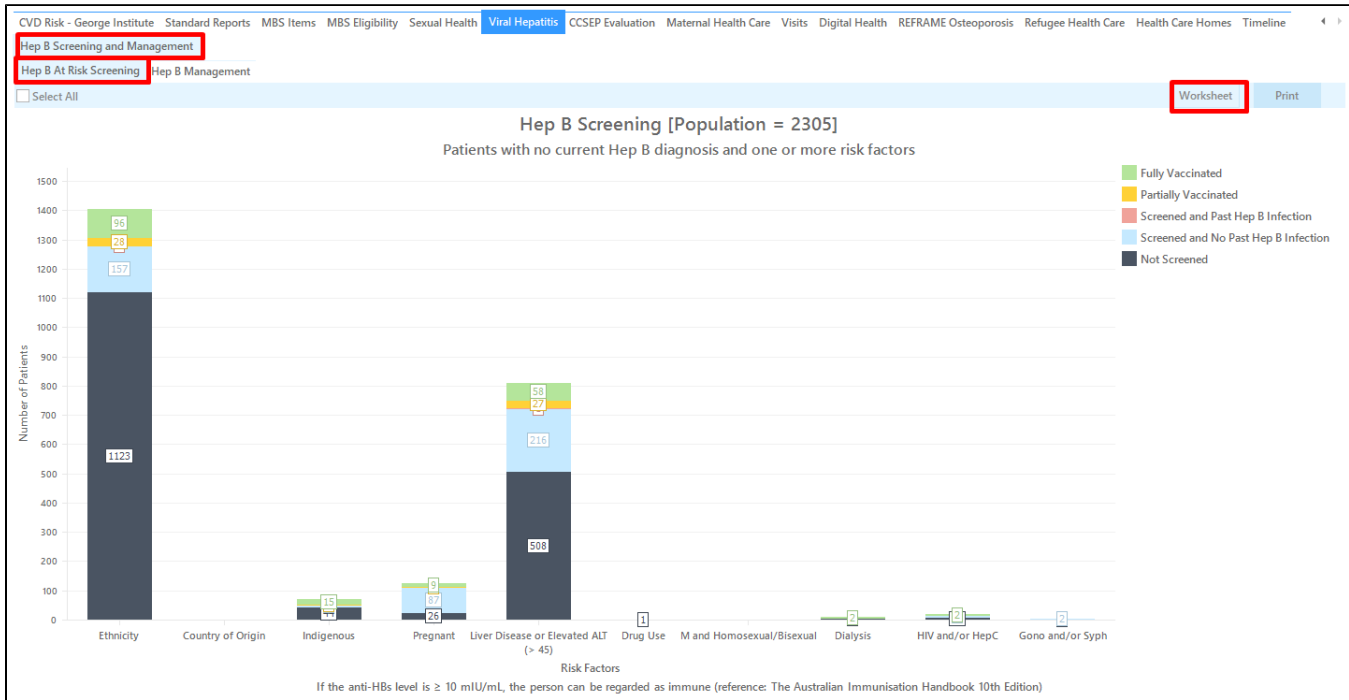

You can also just click on the 'Viral Hepatitis' report tab by scrolling to the right when in the CAT4 view:

There are **2 main tabs** within the module that displays the graphs:

1. **Hep B At Risk Screening**
  - The Screening graph includes patients without a current Hep B diagnosis but with one or more risk factors making them eligible for screening. The graph displays the number of patients that have been screened, not screened, and vaccinated.

- **Risk factors:**
  - Ethnicity
  - Country of Origin
  - Indigenous
  - Pregnant
  - Liver Disease or Elevated ALT (M>30, F>19)
  - Intravenous Drug Use
  - Male and Homosexual/Bisexual
  - Dialysis
  - HIV and/or Hep C diagnosis
  - Gonorrhoea and/or Syphilis diagnosis

## 1. Hep B Management

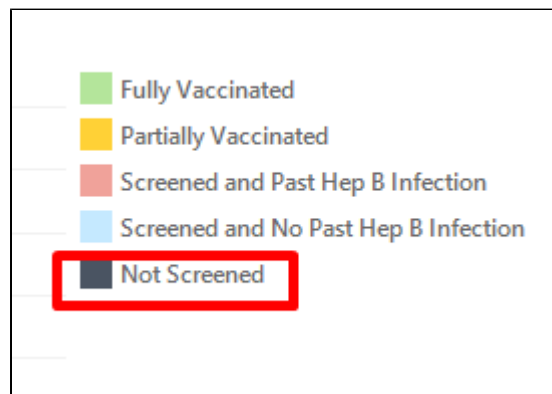

- The Management graph includes patients with a current or past Hep B diagnosis. The graph displays the follow-up pathology testing that has/has not been done and other management items for review.
- **Management Items:**
  - HBV DNA last 12 months
  - ALT last 6 months
  - AFP last 6 months, where HBV/ALT are not at target
  - Liver Ultrasound (L US) last 6 months, where HBV/ALT are not at target
  - On Treatment

Some tips on how to work with these reports and worksheets:

A worksheet listing patients that **have not been screened** can be created by the following method:

1. Go to **Hep B At Risk Screening** tab.
2. Click the **black box in the legend to select the not screened patients**.

Click the **Worksheet** button to see list of patients. The sample worksheet below shows **patients that have not been screened and are at risk due to their elevated ALT values**.

**Patient Reidentification**
