

Editing and Removing Custom Data Files

Data files can be made inactive or can be deleted. Changing the status to 'inactive' will remove the data from the timeline reports but the data will remain in PAT CAT. Deleting a custom data set will remove the data. Both can be done from the screen above which, for already imported data, is accessed by clicking on the file name in the Custom Data screen.

 Import

Refresh List

Filename	Data Source Name	Description	Number of Columns	Date Imported	Status
Sample Custom Data 1.csv	National DM Rates		4	22 December 2015	Active
