Installing to Terminal Services or Citrix

The only differences to the preceding installation instructions are the following:

Clinical Audit needs to be installed on the SERVER

- Log on as the user via a Terminal Services or Citrix session and you will automatically be on the server. Follow the installation instructions in the preceding section.

Clinical Audit needs to be installed under each profile (login) that will be using it.

That is, if multiple people will be using it, the installation needs to be repeated for each login. The application generally only installs once but 'activates' itself for the other logins on additional installs.

- Log on as each user that will be using CAT4 and repeat the install instructions.

NOTE: If access privileges are an issue, then you will need to elevate the user's privileges to install and then restore them afterwards. This is a Microsoft configuration.
