# BP (Blood Pressure)

Measures > BP displays your data as a breakdown of BP status:

- <=130/80
- >130/80-140/90
- >140/90
- Incomplete Data
- No BP Recorded.

The data is displayed as a pie chart. Functions available are as described for Allergies at the beginning of this chapter.

A patient's BP must have both systolic and diastolic values recorded on the same day to be valid. The most recent recording is used. If only one value is recorded this will be displayed in the 'Incomplete Data' category.
A patient's BP will be shown in the higher segment if either of the systolic or diastolic values is above the cut-off. Eg. a BP of 141/85 will end up in the >140/90 category.

BP Mappings with clinical systems

The BP mappings are provided in the 'General Data Mappings' Appendices under Measurements for each clinical application.
