

Musculoskeletal

The Musculoskeletal > Musculoskeletal Risk Factors graph provides a graph of 'Musculoskeletal Risk Factors'. These are:

Low BMI, Vitamin D deficiency, Smoking, High alcohol intake, Calcium deficiency, Fracture (minimal trauma), Chronic kidney disease, Multiple myeloma
Selecting all segments of the graph and exporting to the reidentified patient list will provide a worksheet with details of which risk factors each patient has. This graph along with the new musculoskeletal condition and medication categories will allow patients at risk to be identified for follow up:

- Patients who have musculoskeletal risk factors and are not on a musculoskeletal medication
- Patients who have musculoskeletal diagnosis and are not on a musculoskeletal medication
