

Identify outstanding Diabetes Cycle of Care Items - cross tabulated

 Unknown macro: 'export-link'

Recipe Name:	Identify ALL outstanding Diabetes Cycle of Care items for each of the patients with diabetes in the practice
Rationale:	The Diabetes Cycle of Care is established as a best practice standard for patient outcomes and management of diabetes patients. Practice Incentive Payments (PIPs) of \$35 per patient are available to practices for completed Diabetes Cycles of Care. CAT relies on the information about each item of the CoC to be in the right place in the clinical system, which is not always the case. By using a cross tabulation we are removing patients that had their CoC claimed in the last 12 months which will result in a more accurate report.
Target:	To effectively and timely manage the care of patients with diabetes.
CAT Starting Point:	<div>1. CAT Open - CAT4 view (all reports) loaded</div> <div>2. Population Extract Loaded and Extract Pane "Hidden"</div> <div> a. Filter Pane open and under the 'General' tab 'Active Patients' (3x <2 years) selected (this step can be omitted if you want to search for all patients).</div>

Check out the video for this recipe here:

CAT Start screen

RECIPE Steps Filters:

As we are looking at Medicare items we are going to search for active patients only (at least 3 visits in the last 2 years). You can run the same filter for all patients but as we are trying to find the patients most likely to be regular patients at your practice the active patient filter might show better results.

- In the "General" filter tab click on 'Active (3x in 2yrs)'

General Ethnicity Conditions Medications Date Range (Results) Date Range (Visits) Patient Name Patient Status Providers Risk Factors MBS Attendance Saved Filters

Gender

☐ Male ☐ Female ☐ Other ☐ Not Stated

DVA

☐ DVA ☐ Non DVA

Health Cover

☐ Medicare No. ☐ No

Age

Start Age End Age

☒ Yes ☐ Mths ☐ No Age

Last Visit

☒ Any ☐ None

☐ < 6 mths ☐ < 15 mths

☐ < 24 mths ☐ < 30 mths

☐ Date Range

01/01/2021 to 01/01/2021

Activity

☒ Active (3x in 2yrs) ☐ Not Active

Visits in last 6 mths >= 0

Has Not Visited in last mths

Postcode ☒ Include ☐ Exclude

City/Suburb ☒ Include ☐ Exclude

(lists: comma separated, * wildcard)

Clear General

- In the "Conditions" tab, click the **YES** for Diabetes
- Click "Recalculate"

☐ Gestational ☐ No

Clear Conditions

- In the 'Date Range (Results) tab, choose the '<=12 mths' option

General Ethnicity Conditions Medications **Date Range (Results)** Date Range (Visits) Patient Name Patient Status Providers Risk Factors MBS Attendance Saved Filters

Date Range for Last Recorded Result or Event
The date range selected will filter out results or events that are not within the selected period and treat them as not recorded. This filter is not applicable to graphs that display time periods.

☐ All
☐ <= 6 mths
☒ <= 12 mths
☐ <= 15 mths
☐ <= 24 mths

01/01/2021
 01/01/2021

Use for:
 Measurements
 Pathology
 MBS Items
 Maternal Health (birth date/weight)
 Visit Types
 Digital Health (SHS/ES uploads)
 Smoking/Alcohol
 Influenza
 Cervical Screenings
 FOBT

Clear Results

Click 'Recalculate'

Recipe Steps Reports

- Hide Filters
- Select the "Diabetes SIP Items" tab
- Select the "Items Completed per Patient" tab

Please note that CAT4 can't extract all components of a diabetes cycle of care - these items are currently not counted/extracted in the reports and need to be assessed for each patient based on entries in the patient record:

- Physical Activity
- Self Care Education
- Dietician Review
- Medication Review

This report shows the number of items completed per patient, so the bar on the far right in the graph above has 1 patient with 13 items completed, the next on has 8 patients with 12 items and so on. Starting from the right means you will target patients who are missing only a few items and whose cycle of care can be completed quickly. Starting on the left means you will start with patients who have none or very few items of their cycle of care completed.

For this recipe we assume you want to start from the right to complete the 'easy' ones first.

- Click on the bars starting from the right to select patients with up to 4 items missing. You can choose more if you like.

On the 'MBS Item' tab, click on the 'Not Recorded' tab and select the diabetes SIP bar.

Now we have selected patients with no diabetes SIP item recorded in the last 12 months and patients with four or less care items missing in their diabetes cycle of care. The black dot on the report tabs indicates that parts of the graphs have been selected. Cross tabulation will bring these two selections together.

To apply our cross tabulation, click on the 'Report' icon

This will produce a list with all patient details showing who have 4 or less of the reported care items missing and who did not have a diabetes SIP item claimed in the past 12 months.

Cross Tabulation Reidentify Report [Patient Count = 30]
 Filtering By: Active Patient, Conditions (Diabetes - Yes), Last Results ≤ 12 Mths, Selected: Diabetes SIP Items Completed (12, 13, 14, 15), MBS Not Recorded (Diabetes SIP)

ID	Surname	First Name	Known As	Sex	D.O.B (Age)	Address	City	Postcode	Phone (H/W)	Phone (M)	Medicare	Diabetes SIP Items Recorded	MBS Not Recorded
8273	Surname	Firstname_85 3	Firstname_85 3	F	01/01/1954 (67)	12 John St	Suburb Town	3775	H:07 50505050 W:07 50509999	1234999999	12341234123 4	HbA1c %:9.2,BMI <6mths:38.6, BMI 6- 12mths:BP <6mths:115/ 70,BP 6- 12mths:Foot 6- 12mths:Chol 3.9,Trig:1.9,H DL:0.99,MAlb :8.00,Smokin g,eGFR:68,	Diabetes SIP Last Recorded 2521 10/07/2018

To Export Patient List to Microsoft Excel:

1. Click on the "Export Icon" at the top of the Patient Reidentification window.
2. Click on "Excel"
3. Choose a file name and a location to save to (eg. Create a folder C:/ClinicalAudit/CAT Patient FollowUp)
4. Click "Save"

The steps above will produce a list of patients with contact details in MS Excel which can then be used to:

1. Go back through the individual patient records in the GP Clinical Desktop System (CDS) and update known records
2. Phone patients to update their record
3. Produce a mail merge to recall patients for follow up
