Unknown macro: 'export-link'

Recipe Name:	Identifying Coronary Heart Disease (CHD) patients not on antiplatelet or anticoagulant therapy (antithrombotics)
Rationale:	Biomedical risk factor modification – treat to target. Reducing Risk in Heart Disease guidelines recommend the use of aspirin for all patients with CHD unless contraindicated and the use of anticoagulants (warfarin) for patients at high risk of thromboembolism post MI.
Target:	All active patients currently on your system (active = 3 or more visits in the last 2 years) that have been diagnosed with CHD are not on any anticoagulants.
