

April 2021

Topbar 2.12.3 patch

This patch release enables Topbar to verify if a user has administrator rights for Topbar as well as improving URL support for third party applications.

Topbar 2.12.2 patch

This patch release fixes a .net related issue with the Topbar installation on some systems

Topbar V2.12.1

This Topbar release brings the following changes:

- Improved error messages for Best Practice and Zedmed users
- Added more mapping for influenza and COVID-19 at risk conditions
- Improved immunisation data to include vaccine comment and serial number
- Fixed issue with pregnancy ended not being recognised for Zedmed users
