Heart Failure Triage Tool - How To

Hear from Dr Kean-Seng Lim on the Heart Failure Triage Tool for General Practices

Heart Failure Triage Tool Brochure

The brochure features a blue background with a central illustration of a stack of books. A laptop sits on top of the books, displaying a heart failure triage tool interface. Several small figures of people in white coats are interacting with the books and the laptop. Above the laptop, a heart icon with a white cross is labeled 'Heart Failure Triage Tool'. To the left of the laptop, a heart icon with a pulse line is shown. To the right, a stethoscope icon and a pill bottle icon are visible. Below the illustration, the text reads: 'Heart failure affects a large number of Australians each year, but is still undertreated^{1,2}'. Below this, a small text block provides statistics: 'In 2015 in Australia, there were over 500,000 cases of HF. There were also 61,000 HF-related deaths, and 158,000 hospital admissions for HF.¹ Despite the number of Australians affected by HF, the proportion of patients receiving guideline-directed medical therapy (GDMT) remains low. Real-world evidence has found that only 1 in 5 patients with definite or probable HF were receiving a HF-specific medication.²' At the bottom left, it says 'INFORMATION FOR PRIMARY CARE'. At the bottom right, the logos for 'pencs' and 'NOVARTIS' are displayed.

Heart failure affects a large number of Australians each year, but is still undertreated^{1,2}

In 2015 in Australia, there were over 500,000 cases of HF. There were also 61,000 HF-related deaths, and 158,000 hospital admissions for HF.¹

Despite the number of Australians affected by HF, the proportion of patients receiving guideline-directed medical therapy (GDMT) remains low. Real-world evidence has found that only 1 in 5 patients with definite or probable HF were receiving a HF-specific medication.²
