

NKPI Report Graphs

The graphs available in the NKPI report provide a charts for each key performance indicator. This allows users not only to visualise the information but also to identify the patients by selecting the parts of the graph of interest and then display the patient identification report. We provide full instructions on how to identify the patients from the numerical report in the guide [here](#) but the new graphical reports make this task much easier as the graphs are pre-filtered to the correct NKPI criteria. This allows users to quickly and easily check why patients are not counted/included in each indicator.
