

# Adolescent

The immunisation report for adolescents contains three graphs:

- HPV
- DTP
- VZV

Some age filters are automatically applied, for HPV all patients older than 9 years of age are listed, for DPT and VZV only those aged 9-15 years are listed. If other filters are required for your reporting you can add them through the normal filter interface, for example an upper age limit for the HPV report or patients that have attended in the last 12 months only. Please note if you apply a filter for age the default 9 - 15 years for DPT and VZV will be removed.
