

Diabetes Sip Data Mappings Genie Integrated

The table below lists the data items that make up the Diabetes Cycle of Care. It combines data items already provided in the preceding sections and is provided for the convenience of having these data items listed together. All pathology items are listed for reference with their manual data entry option. The default for pathology is HL7 download and manual entry should not be required but is an option if needed.

CAT Category	Clinical System Mapping
HbA1c	Patient View > Tools > Add Measurement > HBA1C
Eye Exam	needs to be recorded as a Presenting Problem in a consultation record. Genie looks for either Referral to op@, or @eye exam@*
BMI	Patient View > Tools > Add Measurement > BMI
BP	Patient View > Tools > Add Measurement > BP
Foot Exam	needs to be recorded as a Presenting Problem, with either 'Referral to podiatrist@', '@foot exam@', or '@feet exam@'
Cholesterol	Patient View > Tools > Add Measurement > Cholesterol
Triglycerides	Patient View > Tools > Add Measurement > Triglycerides
HDL	Patient View > Tools > Add Measurement > HDL
Microalbuminuria	Patient View > Tools > Add Measurement > This indicator uses both Microalbumin and/or ACR test results
Smoking	Patient View > Smoking Status
eGFR	Patient View > Tools > Add Measurement > GFR
Medication Review	NOT SURE
	*@ indicates one or more wild card characters

NOTE: Pathology results received in HL7 format will be viewable from the Summary Views panel Measurements tab and will be extracted for CAT. Note there are an additional 4 Diabetes SIP items that CAT does not provide data items for:

- Physical Activity
- Self Care Education
- Dietician Review
- Medication Review
