CAT4 - New Users Guide

The Pen CS Clinical Audit Tool (CAT Plus Suite) is an extraction tool that takes a 'snapshot' of your clinical data and allows you to analyse that data. The CAT4 Suite software provides excellent information that you can use to:

- Improve the management of your business
- Identify and target patients who are 'at risk' or have particular needs
- Improve clinical data which, in turn, leads to better patient outcomes
- Potentially increase practice revenue
- Improve your disease and other registers
- Improve data quality for accreditation preparation
- Contribute to medical research

Brisbane South PHN has developed this guide with the input from PEN CS and we gratefully acknowledge their input! You can download the full pdf version from the PHN's website using this link
