

# Genie Integrated Extractor Data Mapping

This mapping is relevant for all users with the latest CAT4 V4.19 release (September 2019). If you haven't updated to the latest version of CAT4 it is strongly recommended as it will add many more reports and new functionality. Please contact Pen CS to arrange an installation of the new CAT4 version which will also allow for scheduled data collections out of business hours and automatic upload of de-identified data to your PHN.
